Problem Statement

Import Data using Transform Maps (Spreadsheet) | Team ID: SWTID-2026-1900

I am	I'm trying to	But	Because	Which makes me feel
I am (Customer) PS-1 A ServiceNow System Administrator PS-2 An HR / data coordinator who owns employee master data PS-3 A ServiceNow developer / trainee	I'm trying to PS-1 Load hundreds of employee records from an Excel spreadsheet into ServiceNow PS-2 Keep ServiceNow employee data in sync whenever a new spreadsheet arrives PS-3 Learn a repeatable way to migrate bulk data into a custom table	But PS-1 Typing records one by one is slow and leads to typos and duplicate records PS-2 Some rows fail or create duplicates when the same employee is imported twice PS-3 I am unsure how Import Sets, Transform Maps and Coalesce fit together	Because PS-1 There is no automatic mapping between the spreadsheet columns and the fields of the target table PS-2 The columns do not match the target fields and no unique key (Employee ID) is used to detect existing records PS-3 The process spans several modules and the field mapping is not visible in one place	Which makes me feel PS-1 Frustrated and worried about data accuracy PS-2 Anxious and unable to trust the imported data PS-3 Confused and hesitant to run the transform on real data

Problem Statement (PS)	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	A ServiceNow System Administrator	Load hundreds of employee records from an Excel spreadsheet into ServiceNow	Typing records one by one is slow and leads to typos and duplicate records	There is no automatic mapping between the spreadsheet columns and the fields of the target table	Frustrated and worried about data accuracy
PS-2	An HR / data coordinator who owns employee master data	Keep ServiceNow employee data in sync whenever a new spreadsheet arrives	Some rows fail or create duplicates when the same employee is imported twice	The columns do not match the target fields and no unique key (Employee ID) is used to detect existing records	Anxious and unable to trust the imported data
PS-3	A ServiceNow developer / trainee	Learn a repeatable way to migrate bulk data into a custom table	I am unsure how Import Sets, Transform Maps and Coalesce fit together	The process spans several modules and the field mapping is not visible in one place	Confused and hesitant to run the transform on real data
