

Project Design Phase-II

Solution Requirements (Functional & Non-functional)

Date	29 September 2026
Team ID	SWTID-2026-1900
Project Name	Import Data using Transform Maps (Spreadsheet)
Maximum Marks	4 Marks

Functional Requirements:

Following are the functional requirements of the proposed solution.

FR No.	Functional Requirement (Epic)	Sub Requirement (Story / Sub-Task)
FR-1	Data Preparation	Prepare the employee spreadsheet with columns: Employee ID, Name, Email, Department, Location Clean data: remove blank rows, duplicates and invalid values Save the file as .xlsx or .csv
FR-2	Target Table Setup	Create the custom table (e.g., u_employee) with the required fields Assign appropriate data types (String, Email) and make Employee ID unique / mandatory
FR-3	Import Set Loading	Upload the file using System Import Sets > Load Data Create the Import Set (staging) table from the file headers Review the loaded rows
FR-4	Transform Map Configuration	Create a Transform Map from the Import Set table to the target table Map each source field to its target field (Field Map) Set Employee ID as the Coalesce field
FR-5	Transform Execution	Run the transform from the Transform Map / Import Set View the Transform History
FR-6	Validation & Error Handling	Verify inserted / updated records in the target table Review ignored, skipped or error rows and correct the source data

Non-functional Requirements:

Following are the non-functional requirements of the proposed solution.

NFR No.	Non-Functional Requirement	Description
NFR-1	Usability	The import is performed through standard ServiceNow modules; field mappings are visible in one Transform Map form and easy to follow.
NFR-2	Security	Only users with admin / import_admin roles can load data and run transforms; target table access is controlled by ACLs; no sensitive data is shared outside the instance.
NFR-3	Reliability	Coalesce on Employee ID ensures repeated imports update existing records instead of creating duplicates; transform results are logged.
NFR-4	Performance	A typical file (for example, 100–1,000 rows) is loaded and transformed within a few minutes without timeouts.
NFR-5	Availability	The solution runs on the ServiceNow cloud instance and is available whenever the instance is active (a Personal Developer Instance may need to be woken up after inactivity).
NFR-6	Scalability	The same Import Set and Transform Map can be reused for larger files or additional fields; scheduled Data Sources can extend it to automated imports.
