

Project Design Phase Problem – Solution Fit

Date	30 September 2026
Team ID	SWTID-2026-1900
Project Name	Import Data using Transform Maps (Spreadsheet)
Maximum Marks	2 Marks

Problem – Solution Fit:

Define CS, fit into CC	1. CUSTOMER SEGMENT(S) CS ServiceNow system administrators, developers and HR data coordinators who must load employee data from spreadsheets.	6. CUSTOMER CONSTRAINTS CC Limited time; spreadsheet quality varies; must not duplicate or overwrite records; limited access / roles on the instance; PDI may hibernate.	5. AVAILABLE SOLUTIONS AS Manual record entry (slow, error-prone); ad-hoc list import through Excel; custom scripts. Pros: quick for very few records. Cons: no mapping control, duplicates, no audit trail.	Explore AS, differentiate
	2. JOBS-TO-BE-DONE / PROBLEMS J&P Import employee records in bulk into a ServiceNow table accurately and without duplicates.	9. PROBLEM ROOT CAUSE RC Spreadsheet columns do not match table fields; no unique key is used; there is no staging step to review data before it reaches the target table.	7. BEHAVIOUR BE Admins clean the file in Excel, then either type records manually or try list import and fix errors afterwards.	
Focus on J&P, tap into BE, understand RC	3. TRIGGERS TR A new batch of employees or a data-migration deadline; a manager asks for the data to be available in ServiceNow.	10. YOUR SOLUTION SL Load the spreadsheet into an Import Set staging table, use a Transform Map with field mappings and Coalesce on Employee ID to insert / update records in the target table, then verify results in the Transform History and list view.	8. CHANNELS of BEHAVIOUR CH 8.1 ONLINE ServiceNow modules (Load Data, Transform Maps, Transform History), documentation and community forums.	Extract online & offline CH of BE
	4. EMOTIONS: BEFORE / AFTER EM Before: stressed, insecure about data accuracy. After: confident and in control with a repeatable process.		8.2 OFFLINE Team discussions, HR sharing the spreadsheet by email or shared drive, review meetings.	
Identify strong TR & EM
